## **Session 2: Digital Currency: Technology Trends and Risk Prevention (14:00- 15:45)**

### **Form: Seminar**

Digital currency is still an innovation. It is not only a financial product but also a new technology, namely blockchain technology. As an invention, digital currency has been controversial since it came out.

How we could deal with the risks of digital currency and how international regulatory cooperation could be strengthened had become important topics of international financial governance. The regulatory policies of governments have become important “weather indicators” and will determine the future of digital currencies.

From 2017, many countries have introduced regulatory policies on their own digital currencies. Since 2018, regulatory policies have been globally coordinated and implemented in a unified manner. Countries are aware that national force is not enough for monitoring digital currencies.

With the constant adjustment of digital currency, it will gradually find the “third way” between freedom and security, and then become an important part of the future international digital finance era.

## **Session 3: The Role of Blockchain in Banks Insurance and Security Companies and Other International Financial Institutions (16:00- 17:30)**

## **Form Seminar**

The essence of finance is credit intermediary, while the essence of blockchain is disintermediation, so the emergence of the blockchain may lead to a revolution in and transformation of traditional financial systems such as banks

How will international financial institutions such as banks insurance and security companies deal with the blockchain as intermediaries in essence? To embrace or dismiss? To accept or reject?

The International financial institutions such as banks insurance and security companies either actively embrace the blockchain technology to subvert themselves cooperate or are overturned by technology giants?
